System Administrator

//www.classifiedads.com/technical_jobs/8z4f6b7hf3db8

A System Administrator,also known as a sysadmin, is a professional who manages and maintains computer systems and networks. They ensure that all computer systems, hardware, software, and related architecture run efficiently and seamlessly in support of an organization's key tasks. System Administrators are critical to ensuring that IT infrastructure runs smoothly. Their tasks range from network management to security enforcement, software upgrades, and troubleshooting. As system health... $60k - $10...
