System Administrator

//www.classifiedads.com/technical_jobs/83xc2zv0p3db8

A System Administrator, also known as a sysadmin, is a professional who manages and maintains computer systems and networks. They ensure that all computer systems, hardware, software, and associated apparatus run efficiently and smoothly to support an institution's key tasks. System Administrators play a significant part in ensuring the seamless functioning of IT infrastructure. Their responsibilities are broad, encompassing network management, security enforcement, updates to software, and... \$60k - \$10...
